## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 10 is rejected under 35 U.S.C. 102(e) as being anticipated by Thompson (US Patent 6,654,468).

Regarding Claim 10, Thompson discloses a hearing aid device having an adaptive directional sound processing, said hearing aid device comprising; at least first and second microphones spaced apart by a distance (Fig. 6, microphones 14 and 12), said first microphone (14) producing a first electronic sound signal and said second microphone (12) producing a second electronic sound signal; sensitivity difference detection circuitry (42) operatively connected to said first and second microphones, said sensitivity difference detection circuitry adaptively produces a compensation scaling amount (18) corresponding to sensitivity differences between said first and second microphones; a scaling circuit (34) operatively connected to said sensitivity difference detection circuitry and said second microphone, said scaling circuit operates to scale the second electronic sound signal in accordance with the compensation scaling amount; and a subtraction circuit (50) operatively connected to said scaling circuit and

said first microphone, said subtraction circuit producing an output difference signal by subtracting the scaled second electronic sound signal from the first electronic sound signal and a delay circuit that delays the second electronic sound signal or the scaled second electronic sound signal by a delay amount (it is inherent that the circuitry will produce a propagation delay for the second electronic sound signal and the scaled second electronic signal).

***Allowable Subject Matter***

3. Claims 3-9, 12, 13, 15, and 19-22 are allowed.

***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin Michalski whose telephone number is (571)272-7524. The examiner can normally be reached on M-F 7-3:30.
